Lawn Watering

Watering is an important part of lawn maintenance, and a total of one inch of water per week (including rainfall) is desirable. Watering deeply two or three times a week in the morning for 30-45 minutes, when necessary, is best for your lawn, encouraging deep root growth. Avoid frequent waterings for short periods of time and avoid watering at night, which promotes lawn disease outbreaks.

You can make your lawn more heat and drought tolerant by using natural products such as Jonathan Green's MAG-I-CAL and Love Your Lawn - Love Your Soil. If you wish to use organic fertilizer, Jonathan Green's Black Beauty Organic Lawn Fertilizer contains Hydretain, a natural "watering magnet" that attracts water to the root area. Hydretain can provide you lawn with up to 25% of its water needs. Even if you don't normally water your lawn, a timely drench in intense heat and drought can save your lawn from suffering.

Our Home and Garden Center sells all of the Jonathan Green products mentioned above, as well as a complete selection of irrigation supplies.
