

## Wrought Iron

Wrought Iron furniture is made from heavy gauge, low carbon rolled steel. State-of-the-art paint systems are used by the manufacturers to provide strong, durable finishes. Wrought Iron offers traditional styling with a more formal look. Its light, airy designs add interest to any setting, furnishing an area with a more formal look. Its light, airy designs add interest to any setting, furnishing an area without making a bold design statement. Iron furniture has a timeless elegance with enduring beauty.

We do not recommend purchasing wrought iron for use near chlorinated swimming areas or in shore locations. Airborne chlorine and salt accelerate the onset of rust and oxidization on these frames.

### **Cleaning**

A spray nozzle and a garden hose is your best defense. Periodic cleaning of frames is recommended. Simply wash with mild soap and rinse thoroughly. Do not use any kind of wax, abrasive materials or strong detergents on textured finishes.

#### Repairing Scratches and Scapes

Touch-up paint to match your frame color is available at Gasper's or from your manufacturer. Place the frame in an open area with plenty of ventilation—preferably outdoors. Using a very fine grit sand paper (120 grit or more) lightly sand the damaged area until smooth with the rest of the surface. Using clean rag lightly dipped in rubbing alcohol or mineral spirits, wipe the sanded area clean of dirt and oil. This primes the affected area and provides the maximum bonding surface for the paint to adhere. Shake spray can for at least one minute. Holding the spray can 8–10 inches away from surface to be touched-up, spray the damaged area lightly in an even left to right motion. This action helps to prevent paint runs.

For best results, make two to three light coats allowing, paint to dry in between coats. Read the information affixed to the spray can for additional information. Touch-up applications should be limited to as small an area as necessary to repair the damage. Be sure to use the left to right motion when touching-up to feather the area into the established finish area. Wait until paint is very dry before determining if an additional coat is needed.
